How can I display more than 20 posts by mt-search.cgi?

By o6asan on Jun 4, 2011 at 5:21 AM [4](#) Vote 0 Votes

I use MTOS5.1.

I wanted to display more than 20 posts, so, tried the below.

<http://example.com/mt-search.cgi?search='key words'&IncludeBlogs=1&limit=40&SearchResultDisplay=ascend>

But MT displayed only 20 posts again. There are 21 matching posts exactly.

How can I realize what I want?

Thanks.

Please try to write this line in your mt-config.cgi file.

```
SearchMaxResults 40
```

Thanks, Nick.

I made it. But I have a problem.

Not only I use "<http://example.com/~ascend>" but also MT shows more than 20 post at other section. For example, Side bar's search box, feed, etc.

I want to make it, when only using "<http://example.com/~ascend>". Is it possible?

Thanks in advance.

Though I'm not sure your situation, are you using mt-search.cgi logic not only for search results, but also for sidebar and other parts?

How about limiting the parts as you wrote,

<http://example.com/mt-search.cgi?search='key words'&IncludeBlogs=1&limit=20&SearchResultDisplay=ascend>

40 => 20 where you want to limit results?

Hi, Nick,

Thanks, again. I finally made it.

What I wanted is this.

When I use "<http://example.com/~ascend>" as an external link, I want to display more than 20 posts by mt-search.cgi.

First, I changed 20 into 40 of the link. But I couldn't have my expecting result because MT's default "SearchMaxResults" set value was very strong.

Next, by your suggestion, I wrote "SearchMaxResults 40" in my mt-config.cgi file. But this reflected other parts, so I was in trouble.

Today, I searched for the tag `<$mt:SearchMaxResults$>` in my template files. I found them in two places and rewrote `<$mt:SearchMaxResults$>` => 20.
